PROFESSIONAL EXPERIENCE

AI Workflow Engineer | 8 Figure Agency

Jan 2026 – Present

- Built **70+ automation workflows** across 10 clients using n8n, Zapier and make.com. Covering onboarding, invoicing, CRM operations and lead outreach, **saving an estimated 2,000+ hours annually**.
- Designed and built **AI powered automation workflows** using LLM APIs (Claude, OpenAI) for lead classification, content generation, and prompt-based decision logic - replacing 2 FTEs for one client.
- Documented end-to-end automation solutions including process maps, requirements, SOPs, and technical specifications, ensuring knowledge transfer and operational continuity across client teams.
- Implemented evaluations, **monitoring and alerting** for production workflows using error-handler patterns, enabling rapid detection and resolution of integration failures.
- Integrated and validated data flowing between QuickBooks Online, HubSpot, GoHighLevel, ClickUp, and Google Ads using REST APIs, OAuth2, webhooks, and deduplication logic.
- Led stakeholder discussions to scope automation feasibility, define success criteria, and communicate technical limitations to non-technical clients.

AI & Automation Developer | STADA IT Solutions

Dec 2024 – Jan 2026

- Conducted **process discovery sessions** with business stakeholders across multiple departments, brainstorming solutions and translating problem statements into automation requirements.
- Co-developed a company-wide Python automation script for license management, **saving 3,000+ hours per year** and eliminating manual error across global operations.
- Co-built an enterprise AI chatbot enabling conversational access to business insights, integrating **structured data from Snowflake** with unstructured internal documents (RAG architecture).
- Prepared, cleaned, and validated source data to support automation pipelines and AI training use cases.

EDUCATION

Master of Engineering, Computer Software Engineering | School of Electrical

Engineering (ETF), University of Belgrade

In progress

Bachelor of Computer Science | School of Computing (RAF), Union University

Completed

TECHNICAL SKILLS

Programming: Python, JavaScript, Java, SQL

Automation & AI: n8n, Power Automate, Zapier, Make.com, Anthropic API (Claude), OpenAI API, Copilot Studio, RAG architectures, LangChain

Data & Reporting: Snowflake, Power BI, Tableau, Excel, data validation & cleaning

Integrations & APIs: REST APIs, OAuth2, Webhooks, Graph API, HubSpot, GoHighLevel, ClickUp, QuickBooks Online, Hunter.io, Apollo.io, Clay

Cloud & Platforms: Microsoft Azure, Google Cloud Platform, Microsoft Power Platform

Collaboration & PM: Agile/Scrum, Notion, Jira, Azure DevOps, Slack, Microsoft Teams, Git

Languages: English (advanced), Serbian (native)

SELECTED PROJECTS

Multi-Team Banking Application | *Academic project (30+ contributors)*

- Managed frontend team and coordinated delivery across multiple sub-teams in an **Agile/Scrum environment**, resolving Git workflow issues and ensuring consistent integration.
- Technologies: Angular, TypeScript, Git, Scrum, Docker

E-commerce Platform, Graduation Thesis | [GitHub](#)

- Full-stack e-commerce application with PayPal integration; authored a 44-page thesis on architecture and implementation. Technologies: Django, Python, JavaScript.
