SUMMARY

AI & Automation Engineer building workflow automation and agentic AI systems for marketing agencies and enterprise clients. Specializing in n8n, Python and LLM-powered workflows that integrate CRMs, billing systems and outreach platforms, saving thousands of hours annually.

EDUCATION

Present **School of Electrical Engineering (ETF) - University of Belgrade**
Master of Engineering - Computer Software Engineering

School of Computing (RAF) - Union University
Bachelor of Computer Science

RELEVANT EXPERIENCE

Jan 2026 - Present **AI Workflow Engineer**
8 Figure Agency

- Built **70+ automation workflows** across 10 clients using n8n, zapier and make.com. Covering onboarding, invoicing, CRM operations and lead outreach, **saving an estimated 2,000+ hours annually**.
- **Owned end-to-end technical delivery** of custom automation systems, integrating clients' existing CRMs, invoicing platforms and outreach tools into reliable pipelines.
- **Built AI leads outreach and research flows** that scan the web for leads, score them as warm or cold, write tailored emails and pull data from Leads API, **replacing 2 FTEs for a client**.
- Automated monthly contract invoicing between QuickBooks Online and Google Ads, removing manual work and human error.
- **Built scheduled AI video ad generation** pipelines via API integrations for client content calendars.
- **Technologies used:** Python, n8n, Zapier, make.com, Claude API, Notion, Slack, GoHighLevel, HubSpot, ClickUp, Google Ads, Hunter.io, QuickBooks Online

Jan 2025 - Jan 2026 **AI & Automation Associate**
STADA IT Solutions

- **Co-developed a company-wide** daily automation script that ensures accurate, regular removal of unused licenses, eliminating manual work and **saving over 5,000 hours per year**.

- **Co-developed a custom AI chatbot** which enables company-wide conversational access to key business insights by leveraging structured **databases in Snowflake** and unstructured data from internal documents.
- **Led business calls, defined and evaluated use cases**, made key decisions, and coordinated task ownership within the team.
- **Technologies used:** Python, Copilot Studio, Power Automate, Snowflake, Azure, Google Cloud Platform, Microsoft Power Platform, Graph API

Nov 2024 - Jan 2025

Ecommerce - Graduation Thesis Project
<https://github.com/marequest/Diplomski-Ecommerce>

- **Developed an eCommerce platform** that enables users to browse products, manage their cart, and complete purchases via PayPal.
- Written a 44-page graduation thesis detailing the project's specification, architecture, implementation, and underlying technologies.
- **Technologies used:** Django, Python, JavaScript

March 2024 - Aug 2024

Bank
<https://github.com/RAF-SI-2023/Banka-1-Frontend>

- I was a significant contributor in a large college project (30+ members), **managing the frontend team**, resolving Git related tasks and issues, and driving consistent delivery across a multi-team environment.
- **Technologies used:** Angular, Typescript, Git, Scrum, Docker

TECHNICAL SKILLS

- **AI & Automation:** Python, n8n, Make.com, Zapier, OpenAI API, Anthropic API, Power Automate
 - **Platforms & CRMs:** HubSpot, ClickUp, GoHighLevel, Asana, QuickBooks Online, Google Ads, Hunter.io, Apollo.io
 - **Cloud & Infrastructure:** Google Cloud Platform, Azure, Microsoft Power Platform, Snowflake
 - **Web Development:** JavaScript, TypeScript, Java, Angular, Django, Git
 - **Collaboration:** Notion, Slack, Microsoft Teams, Azure DevOps
-
